This manuscript has been previously reviewed at another Nature Portfolio journal. This document only contains reviewer comments and rebuttal letters for versions considered at Communications Medicine.

REVIEWERS' COMMENTS:

Reviewer #1 (Remarks to the Author): expertise in ECG

The manuscript is significantly improved after review. I have no further questions

[ED: this reviewer also commented favourably on your response to Reviewer #2s comments.]

Reviewer #3 (Remarks to the Author): expertise in AI

The authors addressed the concerns I raised earlier through additional experiments and descriptions in the text. Two small additional comments:

- 1) The acronym "TTE" should be defined before its first use.
- 2) Can the authors release the model? If not, then providing a specific reason for why not is important. The model's availability could help future researchers build off of the work, and as the authors describe this is an important future step. If the model is unable to be released due to privacy concerns, how can it be used in other institutions or cohorts?
